YOU MAY ALSO LIKE:

PAD SAVER

Help your pads last longer with a pad saver: a fluffy tapered rod that you store in your saxophone to help absorb any moisture that could eat away at the pads.

ROVNER LIGATURE

An upgraded ligature will distribute pressure on the reed differently and will last much longer than a traditional metal ligature.

UPGRADED CASE

Every saxophone player needs a contoured case with extra storage space and easier handling!

SHEET MUSIC

IMC has TONS of fun sheet music that you'll love to play from Disney Movies, Cartoons, Broadway Musicals, Popular Television, Pop & Rock Music, and Classical.

MUSIC STAND

Don't have a music stand yet? How are you holding your music up? We've got folding music stands in many colors, as well as sturdy stands that are built to last!

HOW MANY SAXOPHONISTS DOES IT TAKE TO CHANGE A LIGHTBULB?

One, but they'll go through the whole box of light bulbs before they find the right one.

HELPFUL REMINDERS

Take care of your reeds!

Reeds will last longer if you take care of them properly. Rinse your reeds after use to remove acidic spit from the cane. Make sure your reeds are dry and then store them in a reed guard or humidified case. If your reeds look green, look wavy, or have a chip in it, it's time to throw it away! If you want to be generous you can give a reed to a friend in need. If you love capitalism and want to make your parents proud you can sell them for a profit.

Less cork grease is more cork grease!

From time to time you may find putting your saxophone together or fitting your mouthpiece onto your instrument difficult. Cork grease is a life saver in this situation but too much cork grease will make your life miserable, sticky, and stinky. Use cork grease sparingly to make sure everything fits together smoothly. If grease seeps out of the seams or starts turning brown wipe it off of your instrument with a cloth.

1

Cleaning Swab

With your mouthpiece and neck removed, drop the weighted end of the cord through the bell end of the saxophone. Gently pull the cloth all the way through the horn. This keeps the inside of your sax dry and clean, ensuring that your pads will last longer. Be sure to swab your instrument after every use.

2

Duster Brush

Use this handy little duster brush to clean gunk out of the saxophone keys. The spindled end fits between keys that are very close together. The sweeper end is great for grabbing bigger particles, and reaching closer to the body of the instrument. Make sure to keep this brush clean, and to use it whenever you spot grime that may be affecting the playability of your saxophone's keys.

3

Key Oil

If your keys are feeling tight or resistant, remove the cap from end of the bottle and apply a small drop on the pivot point that's giving you issues. Use sparingly. If this doesn't correct your issue, your saxophone may need an adjustment. Bring it into IMC, and get it back in playing condition.

4

Mouthpiece Brush

Rinse mouthpiece under water, and scrub inside with mouthpiece brush. Be sure to do after each time you play, or when mouthpiece is noticeably dirty.

5

Reed Guard

Gently insert the tip of the reed underneath the protective covering. Do not force in as reed may break.

6

Mouthpiece Cushion

Peel sticky backing off of mouthpiece cushion and align with the tip of the mouthpiece where your teeth rest. This cushion will protect your mouthpiece from bite marks and cradle your teeth.

7

Cork Grease

If the cork on your saxophone neck is dry and the mouthpiece is too difficult to put on, spread a little cork grease onto the cork and rub in with your fingers. Not too much! The mouthpiece should slide on easily.

8

Mouthpiece Saver

To keep moisture from settling into and damaging your mouthpiece while you're not playing, store the mouthpiece saver inside the mouthpiece when you put it in your case.

9

Thumb Rest Cushion

Slip the thumb rest cushion over the metal thumb rest to make playing more comfortable.

10

ID Card

Fill out ID card completely and bring (or mail) in to IMC. We'll laminate it and create a nice luggage tag for your case!
